SUMMARY

Computer Science student specializing in Cyber Security, graduating in 2026, with hands-on experience in SIEM setup, log analysis, network security, and secure application development. Built a home SOC lab using Wazuh and ELK Stack. Familiar with OWASP Top 10, authentication, RBAC, and basic vulnerability testing.

EDUCATION

B.Tech, Computer Science – Cyber Security Specialization

2022 – 2026 (Expected)

Jaypee University of Information Technology, Solan, HP

Relevant Coursework: System Security, Network Security, Operating Systems, Cryptography, Data Structures

Honours: 1st Prize – University Hackathon; project selected for patent filing

TECHNICAL SKILLS

Security Tools: Burp Suite, Wazuh, Nmap, Nessus (basic), Metasploit (basic)

SIEM & Monitoring: ELK Stack, Wazuh, log analysis, alerting

Security Concepts: OWASP Top 10, JWT/OAuth2, RBAC, IDS/IPS, vulnerability assessment, threat detection

Networking: TCP/IP, VLANs, ACLs, subnetting, firewall rules, Cisco Packet Tracer

Scripting & Development: Python, JavaScript, Node.js, REST APIs, Docker

OS & Platforms: Linux, Windows Server (basic), Git, GitHub Actions

EXPERIENCE

ApexPlanet Technologies

Remote

Web Developer Intern

Jun 2025 – Jul 2025

- Worked on JWT-based authentication and input validation for REST API endpoints to reduce common OWASP risks.
- Reviewed legacy code for insecure patterns and improved linting rules to catch issues earlier in development.
- Added rate limiting and caching to reduce abuse on API endpoints.

Technical Club (Core Team), JUIT

Solan, HP

Web Developer

2022 – 2024

- Built RBAC into the club portal backend to restrict admin actions to authorised roles only.
- Added HTTPS, secure session handling, and HTTP security headers.

PROJECTS

SOC Automation & Threat Detection Lab

ELK Stack, Wazuh, Python, Linux

- Set up a home SOC lab using Wazuh as the SIEM and ELK Stack for log collection and visualisation.
- Wrote Python scripts to normalise security logs from multiple endpoints.
- Created Kibana dashboards for brute-force SSH attempts, failed logins, and port scan patterns.
- Added custom Wazuh alerts for repeated failed authentication and suspicious privilege-related activity.

Network Security Lab – VLAN Segmentation & ACL Design

Cisco Packet Tracer, TCP/IP

- Designed a segmented network topology in Cisco Packet Tracer using VLANs.
- Configured ACLs and inter-VLAN routing to limit access between network zones.
- Tested attack paths and verified that unauthorised traffic was blocked.

TGE Store – Secure E-commerce Platform

Next.js, Docker, Shopify API

- Implemented HTTP-only cookie sessions to reduce session theft risk.
- Added RBAC middleware to separate admin and user access.
- Containerised the project with Docker Compose for a consistent setup.

Multi-Language Cloud LMS – Patent Selected

Moodle, MySQL, Cloud

- Built a cloud-based LMS with role-based access control for course administration.
- Designed access control so only privileged accounts could manage content.
- 1st Prize, University Hackathon; project selected for patent filing.

ADDITIONAL

- **CI/CD Security:** Configured GitHub Actions with lint, test, and deploy stages; managed secrets with GitHub Encrypted Secrets.
- **Languages:** Hindi (native), English (professional)
